The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY WHICHEVER IS LONGER, FROM THE MAILING DA - Extensions of time may be available under the provisions of 37 CFR 1.13 after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period w - Failure to reply within the set or extended period for reply will, by statute, Any reply received by the Office later than three months after the mailing earned patent term adjustment. See 37 CFR 1.704(b).	ATE OF THIS COMMUNICATION B6(a). In no event, however, may a reply be ting rill apply and will expire SIX (6) MONTHS from cause the application to become ABANDONE	N. mely filed n the mailing date of this communication. ED (35 U.S.C. § 133).				
Status						
<u> </u>	Responsive to communication(s) filed on <u>02 August 2005</u> .					
<i>;</i> —	,—					
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is						
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.						
Disposition of Claims						
4)⊠ Claim(s) <u>1-56</u> is/are pending in the application.						
4a) Of the above claim(s) is/are withdrawn from consideration.						
5) Claim(s) is/are allowed.						
6) Claim(s) 1-56 is/are rejected.						
7) Claim(s) is/are objected to. 8) Claim(s) are subject to restriction and/or	r election requirement.					
, <u> </u>	•					
Application Papers						
9) The specification is objected to by the Examine						
10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner.						
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).						
11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.						
Priority under 35 U.S.C. § 119						
12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of:						
1. Certified copies of the priority documents have been received.						
2. Certified copies of the priority documents have been received in Application No						
3. Copies of the certified copies of the priority documents have been received in this National Stage						
application from the International Bureau (PCT Rule 17.2(a)).						
* See the attached detailed Office action for a list	of the certified copies not receiv	ed.				
Attachment(s)						
1) Notice of References Cited (PTO-892)	4) 🔲 Interview Summar Paper No(s)/Mail [
 2) Notice of Draftsperson's Patent Drawing Review (PTO-948) 3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) Paper No(s)/Mail Date 		Patent Application (PTO-152)				

DETAILED ACTION

Response to Amendment

- 1. The amendment and written response filed on 8/2/2005 has been entered and considered.
- 2. Claims 57-58 were cancelled.
- 3. Claims 1-56 are pending.
- 4. The indicated allowability of claims 1-56 is withdrawn in view of the newly discovered reference(s) to Nakai et al (U.S. Patent No. 5,909,602). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-56 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakai et al (U.S. Patent No. 5,909,602).
 - a. Referring to Claim 1, Nakai discloses an image processing apparatus (copying system as shown in figure 41) comprising: first receiving means that receives information from a first scanning apparatus indicating the presence of a forgery-preventing function in the first scanning apparatus, and receiving information from a second scanning apparatus indicating the absence of a forgery-preventing function in the second scanning apparatus (copying machine 93 with specimen image judging section, column 32 line 25 is the claimed first scanning apparatus

Art Unit: 2621

with a forgery preventing function; and copying machine 91 without the specimen image judging function is the claimed second scanning apparatus; and the first receiving means is simply the communication interface of copying machine 93; see column 32, lines 4-31); second receiving means that receives information from a first printing apparatus indicating the presence of a forgery-preventing function in the first printing apparatus, and receiving information from a second printing apparatus indicating the absence of a forgery-preventing function in the second printing apparatus (copying machine 93 dictates where the processed image should be sent to based on the functionality of the designated copying machine. At column 38, lines 31-45, the copying machine 93 decides the copying machine 91 does not have the capability to print a visible processed image, therefore, it sends the processed image to copying machine 92. Although Nakai does not explicitly teach why the copying machine 91 can't carry out the printing of visible processed image, it is reasonable to assume that the laser printer section of copying machine 91 may not have certain forgery prevention such as function of printing center mark as mentioned at table 1, which would prevents the user from copying security documents like paper money or the likes. Additionally, Nakai, at column 36, lines 53-60, points out in the event of one machine does not have certain function; it is economical to send the processing job to another machine that does. Also see column 31, lines 11-18. Note printing center marks is to be considered as a forgery-preventing function for laser printer section. Additionally, the examiner notes printing the processed image at lower quality

may also to be considered a forgery-preventing function; and the copying machine 91 may not have the capability to print a visible low quality image, therefore, the printing job is transferred to copying machine 92, which is capable of that function; column 38, lines 46-50); and controlling means (control panel 90) that controls processing of image data received from one of the first or second scanning apparatuses to second the received image data to one of the first or second printing apparatuses based on the information received by the first receiving means and the information received by the second receiving means.

- b. Referring to Claim 2, Nakai discloses wherein said controlling means sends image data received from the second scanning apparatus, which does not have a forgery-preventing function, to the first printing apparatus, which does have a forgery-preventing function (see explanation in Claim 1).
- c. Referring to Claim 3, Nakai discloses notifying means that notifies a user by a warning when the forgery-preventing function of the first scanning apparatus and the forgery preventing function of the first printing apparatus judges that the image data is data of a specific image (column 32, lines 66-67 and column 33 line 1 and lines 8-9; note the specific image is paper money column 21, line 15).
- d. Referring to Claim 4, Nakai discloses wherein the data of the specific image is information expressing a specific pattern or a digital watermark (note paper money contains a specific pattern or a watermark).
- e. Referring to Claim 5, Nakai discloses wherein the first receiving means and the second receiving means receive the information form the first and second

scanning apparatuses and from the first and second printing apparatuses when the image processing apparatus turns on (the copying machines are connected as a network, the existence and functionalities of the copying machines are known to others when they are turned on).

- f. Referring to Claim 6, Nakai discloses wherein the first receiving means and the second receiving means receive information indicative of the presence or absence of a forgery-preventing function when at least one of the first or second scanning apparatuses or the first or second printing apparatuses is changed (as explained before, the copying machines are connected as network, the change of the network topology will be known to the master copying machine like copying machine 93).
- g. Referring to Claim 7, Nakai discloses wherein the first receiving means and the second receiving means receive the information from the first and second scanning apparatuses when the first and second scanning apparatuses receive a scanning indication, or the first and second printing apparatuses receive a printing indication, form the image processing apparatus (the specimen image judging section of copying machine 93 functions when a user wants to print suspicious document, like paper money on one of the copying machines on the network).
- h. Referring to Claim 8, Nakai discloses wherein the first receiving means and the second receiving means receive information indicative of the presence or absence of a forgery-preventing function when a new scanning apparatus or a new printing

Art Unit: 2621

apparatus is connected to the image processing apparatus via a network (see figure 41 for networking).

- i. Referring to Claim 9, Nakai discloses wherein the controlling means sends the image data received from the first scanning apparatus, which has a forgery-preventing function, to one of the first or second printing apparatuses according to a section by an operator of the image processing apparatus (the image is judged at copying machine 93 and sent to a copying machine upon confirmation of the user).
- j. Referring to Claim 10, Nakai discloses wherein the controlling means sends a permission signal to the first scanning apparatus permitting the first scanning apparatus, which has a forgery-preventing function, to send image data directly to one of the first or second printing apparatuses as selected by an operator, if the forgery-preventing function of the first scanning apparatus judges the image data as data of a specific image (the image is permitted by the copying machine 93 to be sent to copying machine 92 to print out a visible image with a center mark as explained in claim 1).
- k. Referring to Claim 11, Nakai discloses an image processing apparatus (copying system as shown in figure 41) comprising: first receiving means that receives information from a first scanning apparatus indicating the presence of a forgery-preventing function in the first scanning apparatus, and receiving information from a second scanning apparatus indicating the absence of a forgery-preventing function in the second scanning apparatus (copying machine 93 with specimen

Art Unit: 2621

image judging section, column 32 line 25 is the claimed first scanning apparatus with a forgery preventing function; and copying machine 91 without the specimen image judging function is the claimed second scanning apparatus; and the first receiving means is simply the communication interface of copying machine 93; see column 32, lines 4-31); second receiving means that receives information from a first printing apparatus indicating the presence of a forgery-preventing function in the first printing apparatus, and receiving information from a second printing apparatus indicating the absence of a forgery-preventing function in the second printing apparatus (copying machine 93 dictates where the processed image should be sent to based on the functionality of the designated copying machine. At column 38, lines 31-45, the copying machine 93 decides the copying machine 91 does not have the capability to print a visible processed image, therefore, it sends the processed image to copying machine 92. Although Nakai does not explicitly teach why the copying machine 91 can't carry out the printing of visible processed image, it is reasonable to assume that the laser printer section of copying machine 91 may not have certain forgery prevention such as function of printing center mark as mentioned at table 1, which would prevents the user from copying security documents like paper money or the likes. Additionally, Nakai, at column 36, lines 53-60, points in the event of one machine does not have certain function; it is economical to send the processing job to another machine that does. Also see column 31, lines 11-18. Note printing center marks is to be consider as a forgery-preventing function for laser printer section. Application/Control Number: 09/915,421 Page 8

Art Unit: 2621

Additionally, the examiner notes printing the processed image at lower quality may also to be considered a forgery-preventing function; and the copying machine 91 may not have the capability to print a visible low quality image, therefore, the printing job is transferred to copying machine 92, which is capable of that function); inputting means that inputs information related to a selected scanner apparatus for image scanning; and notifying means that notifies a user, based on the information received by the first receiving means (column 32, lines 66-67 and column 33 line 1 and lines 8-9; note the specific image is paper money column 21, line 15), the information received by the second receiving means, and the information input by the input means, of at least one available printing apparatus for which image data can be sent to for printing (column 32, lines 32-38; column 38 lines 31-45; note the inputting means is just the network connection among copying machines since the image are sent to each other electronically).

- 1. Referring to Claim 12, Nakai discloses wherein the notifying means notifies the user that the first printing apparatus, which has a forgery-preventing function, is an available printing apparatus if the selected scanning apparatus is the second scanning apparatus, which does not have a forgery-preventing function (column 37, lines 58-65).
- m. With regard to Claim 13, see explanation of Claim 12.
- n. With regard to Claim 14, see explanation of Claim 3.
- o. With regard to Claim 15, see explanation of Claim 4.

Art Unit: 2621

p. With regard to Claim 16, see explanation of Claim 5.

- q. With regard to Claim 17, see explanation of Claim 6.
- r. With regard to Claim 18, see explanation of Claim 7.
- s. With regard to Claim 19, see explanation of Claim 8.
- t. With regard to Claim 20, see explanation of Claim 9.
- u. Referring to Claim 21, Nakai discloses wherein the notifying means further notifies the user of the specification information for the user to select a preferable scanning apparatus and printing apparatus (column 37, lines 58-65).

Page 9

- v. With regard to Claim 22, see explanation in Claim 1.
- w. With regard to Claim 23, see explanation in Claim 1. Note the copying machines are embedded with computer program to execute the steps recited in claim 1.
- x. With regard to Claim 24, see explanation of Claim 11.
- y. With regard to Claim 25, see explanation of Claim 11, Note the copying machines are embedded with computer program to execute the steps recited in claim 11.
- z. With regard to Claim 26, see explanation in Claim 1. the interface unit is the communication interface unit in copying machine 93 that receives information from the other copying machines like 91 and 92 and the processor unit is control panel 90.
- aa. With regard to Claim 27, see explanation in Claim 2.
- bb. With regard to Claim 28, see explanation in Claim 3.
- cc. With regard to Claim 29, see explanation in Claim 4.
- dd. With regard to Claim 30, see explanation in Claim 5.

Art Unit: 2621

ee. With regard to Claim 31, see explanation in Claim 6.

- ff. With regard to Claim 32, see explanation in Claim 7.
- gg. With regard to Claim 33, see explanation in Claim 8.
- hh. With regard to Claim 34, see explanation in Claim 9.
- ii. With regard to Claim 35, see explanation in Claim 10.
- jj. With regard to Claim 36, see explanation in Claim 1; and the claimed point and display units are shown in figures 12 and 16.

Page 10

- kk. With regard to Claim 37, the user is formed through the LCD display which copying machine is selected for printing the image (column 37, lines 46-65).
- 11. With regard to Claim 38, see explanation in Claim 2.
- mm. With regard to Claim 39, see explanation in Claim 3.
- nn. With regard to Claim 40, see explanation in Claim 4.
- oo. With regard to Claim 41, see explanation in Claim 5.
- pp. With regard to Claim 42, see explanation in Claim 6.
- qq. With regard to Claim 43, see explanation in Claim 7.
- rr. With regard to Claim 44, see explanation in Claim 8.
- ss. With regard to Claim 45, see explanation in Claim 9.
- tt. With regard to Claim 46, see explanation in Claim 10.
- uu. With regard to Claim 47, see explanation in Claim 1, additionally, Copying machine 93 contains the claimed judging means at column 38, lines 31-38.
- vv. With regard to Claim 48, see explanation in Claim 2.
- ww. With regard to Claim 49, see explanation in Claim 3.

xx. With regard to Claim 50, see explanation in Claim 4.

yy. With regard to Claim 51, see explanation in Claim 5.

zz. With regard to Claim 52, see explanation in Claim 6.

aaa. With regard to Claim 53, see explanation in Claim 7.

bbb. With regard to Claim 54, see explanation in Claim 8.

ccc. With regard to Claim 55, see explanation in Claim 10.

ddd. With regard to Claim 56, see explanation in Claim 47.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tom Y. Lu whose telephone number is (571) 272-7393. The examiner can normally be reached on 8:30AM-5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Mancuso can be reached on (571)-272-7695. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
